Accountability and Reporting in the Prairies & Northern Territories Region

Lisa Davis, MSW

Coordinator, CLIP

(Calgary Local Immigration Partnership)

Weaving a Tapestry

CLIP is leading three interwoven pieces of work:

- Developing a **Performance Measurement Framework** for the PNT LIPs

- Creating a **Community Dashboard** for the PNT LIPs that will allow reporting on standardized outcome indicators plus local data related to each LIPs strategic priorities

- Coordinating a **LIPs Network Community Data Program Pilot** across Canada

PNT Performance Measurement

- The PNT region will be using **Results-Based Accountability** (RBA), which has two key components:

    - **Population Accountability –** About the well-being of whole populations
    - **Performance Accountability** – Used to assess each LIP's effectiveness as a collective impact backbone organization (standardized surveys across the PNT)

RBA – A Shift in Focus

- RBA looks at <u>means</u> to improve results versus <u>ends</u> in themselves

- This shifts the focus towards:
  - Collaboration
  - System change
  - Service integration
  - Funding pools

- LIPs aim to improve collective outcomes for immigrants through the work of their partners

Population Indicators

- Report on the well-being of populations (e.g., all immigrants in Calgary)

- The <u>outcomes</u> desired might include a city/region that:
  - Is safe
  - Has diverse and inclusive communities
  - Is well governed
  - Is prosperous
  - Is healthy

Population Indicators, cont'd.

- More <u>outcomes</u> might be a city/region that:
  - Supports recreation, fun, and creativity
  - Enables lifelong learning
  - Is attractive and well designed

- Population <u>indicators</u> then might include:
  - Healthy births; healthy children and adults
  - Children ready for school; succeeding in school
  - Families with adequate income
  - People who feel they belong in the community

PNT Performance Measures

Measure the impact of LIPs as collective impact backbone organizations (two 2-page surveys):

- <u>Network Health Scorecard</u> for LIP Council, IAT, Working Group members, and committed partners to assess:
  - LIP Purpose, Performance, Operations, and Capacity
  - Customized local questions can be added

- <u>Secondary Partners Survey</u> for others involved in one-off collaborations to assess knowledge about and impact of the LIP
  - Adapted from Peel Newcomer Strategy's survey

PNT Community Dashboard

- Centralized tool for reporting demographics and population indicators in a consistent way (enables regional roll-up)

- Customized to enable reporting of local success stories + other relevant indicators:
  - School registration (postal code maps)
  - Housing
  - Health and wellness
  - Social service/subsidy program uptake

LIPs Network CDP Pilot

- Connecting LIPs to their local Community Data Consortium

- Support access to CDP data – e.g., census, tax filer

- Customized geographies for local data consortia

- Access to training, webinars, tools & templates

- Securing IRCC data for CDP use

Current Status

- PNT Performance Measurement Framework working group meets via conference call

- Members will be seeking out local data relevant to their LIP's strategic plan

- CLIP is coordinating input into indicators that can be compiled for all PNT LIPs through the CDP

- Customized dashboard is under development by IT specialists at the City of Calgary
